Occasionally during the night one can see meteors. They resemble streaks of light and for this reason are called falling stars. As meteors travel through space they sometimes fall into the Earth’s gravitational pull and the friction between these rocks and the atmosphere causes most of them to burn up before they reach the surface of the Earth. At times, however, very big pieces of meteorites fall to Earth and although they are burned up to a large extent, some pieces do reach the surface. These are then called meteorites. There is nothing that man fears more than the touch of the unknown. He wants to see what is reaching towards him, and to be able to recognize or at least classify it. Man always tends to avoid physical contact with anything strange. In the dark, the fear of an unexpected touch can lead to panic. Even clothes give insufficient security: it is easy to tear them and pierce through to the naked, smooth, defenseless flesh of the victim. All the distances which men create round themselves are dictated by this fear. They shut themselves in houses which no one may enter, and only then do they feel some measure of security.
